Pseudophloeospora eucalypti
Fungal Planet 60 – 23 December 2010

**Pseudophloeospora** Crous & R.G. Shivas, *gen. nov.*

*Phloeosporae* morpholigic simili, sed conidiatibus in vivo pycnidia-

**Etymology.** Morphologically similar; but distinct from *Phloeospora.*

Associated with leaf spots. *Conidiomata* amphiogenous, pycnidi-

**Culture characteristics.**

- Colour illustrations
- Conidiomata (in the dark, 25 °C, after 2 wk):
  - Conidiomata terminal or lateral, hyaline, smooth, tapering to an acutely truncate apex; proliferating inconspicuously percurrently at apex. *Conidia* hyaline, smooth, filiform, flexuous, subcylindrical, tapering to an acutely rounded apex and truncate base, not thickened nor darkened, transversely euseptate.

*Pseudophloeospora eucalypti* Crous & R.G. Shivas, *sp. nov.*

*Phloeosporae* eucalypticae similis, sed cellulis conidiogenis percurrenter proliferantibus et conidiis 3-septatis discernitur.

**Etymology.** Named after the host genus from which it was collected, *Eucalyptus.*

*Leaf spots* amphiogenous, irregular, pale brown, with raised, thin, red-brown margins, 3–10 mm diam. *Conidiomata* amphi-

**Notes.** — Based on its pycnidial conidiomata, and percur-

**Type species.** *Pseudophloeospora eucalypti.* MycoBank MB517530.
